

EDUCATION:

University of Michigan Ann Arbor - College of Literature, Science, and Arts August 2021 - May 2025
Bachelor of Science, Computer Science (GPA 3.9/4.0)

Classes: Discrete Math (EECS 203), Data Structures and Algorithms (EECS 281), Computer Organization (EECS 370), Natural Language Processing (EECS 487), Foundations of Computer Science (EECS376), Software Engineering (EECS 481), Computer Game Development (EECS 494)

WORK EXPERIENCE:

University of Michigan College of Engineering - Instructional Aide September 2022 - Present

- Instructing and facilitating laboratory sections for introductory and intermediate Computer Science courses, including EECS 183 and EECS 280, confidently leading lectures, guiding discussions, and providing effective instruction to a diverse cohort of 30+ students.
- Fostering an engaging and productive learning environment through group office hours sessions and proficiently holding virtual and in-person office hours.
- Coordinating peers as an IA team lead by orchestrating office hours schedules, facilitating seamless communication among diverse groups, and actively contributing to the design and enhancement of course content to improve students' experience.

PROJECT EXPERIENCE:

University of Michigan Classes:

- Created the proof of concept demo for a 3D action multiplayer video game called *Pick It Up!*, then managed a 10 person team over 9 weeks to produce a full version of the game, which we released on Itch.io, IndieDB, GameJolt, and other sites. I hand-animated 3 minutes of 2D animated cutscenes for the game, and assisted in all areas of development. Our game won the 2024 EECS 494 showcase, and has garnered more than 100 downloads across all sites.
- Contributed requested features and bug fixes to the open-source video game OpenRCT2, participating in pass-around code review and requirements elicitation.
- Implemented a branch and bound algorithm using C++ with minimum spanning trees to solve the Traveling Salesperson Problem, demonstrating strong optimization skills by reducing the operation time from 160% to 110% the time of the best possible solution.
- Created real-time stock market simulator with streaming algorithm, highlighting expertise in financial computing.
- Implemented a relational database with hash tables and binary search trees, showcasing proficiency in efficient data management.
- Developed a research paper with a small team using natural language processing (TF-IDF and dense embedding models) using Python to investigate the veracity of Michel Foucault's Author Function.

SKILLS:

Programming: C, C++, C#, Python

Softwares: Visual Studio, VS Code, Unity, Blender, Github, Excel, Google Suite, Microsoft Office, Adobe Suite (Premier, Photoshop, Illustrator, InDesign, Animate, After Effects), Jira
